Armstrong, J. Scott. **How to Avoid Exploratory Research.**

No. 4, pp. 27-30.

Many pitfalls and dangers are inherent to exploratory research. The author suggests alternate approaches to advertising and marketing problems.

Armstrong, J. Scott. See Montgomery and Armstrong.

Axelrod, Joel N. **14 Rules for Building an MIS.**

No. 3, pp. 3-11.

The history of Marketing Information Systems is "a series of roadblocks on which someone has tripped." The author suggests how to avoid them by following 14 rules.

Bauer, Raymond A. and Scott M. Cunningham. **The Negro Market.**

No. 2, pp. 3-13.

Negroes do buy differently than whites, and not just because of their economic status. There is, in fact, something we can correctly call the Negro market.

Becker, Boris W. and John G. Myers. **Yeasaying Response Style.**

No. 6, pp. 31-36.

Because super-agreeable people exaggerate positive and negative ratings, we need a better way of removing the contaminating effects of yeasaying.

Blackwell, Roger D., James S. Hensel, and Brian Sternthal. **Pupil Dilation: What Does It Measure?**

No. 4, pp. 15-18.

Research indicates that pupil dilation measures can be useful in studying advertising effectiveness. More work needs to be conducted, however, to find just what processes are monitored.

Birdwell, Al. See Stafford, Birdwell, and Van Tassel.

Bogart, Leo, B. Stuart Tolley, and Frank Orenstein. **What One Little Ad Can Do.**

No. 4, pp. 3-13.

Something is happening, not to everyone, but to a demonstrable few. You may be surprised to learn what one ad can do.

Caffyn, John and Nigel Rogers. **British Reactions to TV Commercials.**

No. 3, pp. 21-27.

Successful US TV commercials were less effective in the UK—more entertaining, perhaps, than British commercials, but probably less persuasive.

Cagley, James W. and Richard N. Cardozo. **White Responses to Integrated Advertising.**

No. 2, pp. 35-39.

Attitudes toward integrated advertisements are shown to vary by degree of racial prejudice, and ads with all-Negro or all-white principals may be more effective than integrated ads.

Cardozo, Richard N. See Cagley and Cardozo.

Clancy, Kevin J. and Robert Garsen. **Why Some Scales Predict Better.**

No. 5, pp. 33-38.

Monadic scales attempting to measure probability of purchase may actually reflect different life styles rather than propensity to buy. Relative appeal may be a better measure.

Corey, Lawrence G. **How to Isolate Product Attributes.**

No. 4, pp. 41-44.

Item analysis of attitudes can be used to identify consumers' total perception of a product. Consumers' perceptions can then be utilized to create effective advertising propositions.

Cox, Keith K. **Social Effects of Integrated Advertising.**

No. 2, pp. 41-44.

Integrated advertising in five major magazines increased markedly during the past 20 years, and has shifted occupational roles of Negroes from cooks, maids, butlers, etc., to businessmen, students, and consumers.

Cunningham, Scott M. See Bauer and Cunningham.

Dominick, Joseph R. and Bradley S. Greenberg. **Three Seasons of Blacks on Television.**

No. 2, pp. 21-27.

There has been increased use of Negroes in both daytime and prime-time TV commercials since 1967. However, portrayal of Negroes in realistic Negro roles is yet to come.

Draper, Jean, Richard W. Hansen, and Richard A. Scott. **Timing of Real Estate Advertising.**

No. 6, pp. 21-24.

Results dispel a common myth that weekend real estate advertising is most efficient.

Friedman, Lawrence. **Constructing a Media Simulation Model.**

No. 4, pp. 33-39.

Simulation applications can generate accurate pictures of media exposure patterns and can maximize desirable characteristics of audiences.

Gardner, David. **The Distraction Hypothesis in Marketing.**

No. 6, pp. 25-30.

Do we subvocally argue with persuasive messages? Apparently not, according to this test of the distraction hypothesis.

Garsen, Robert. See Clancy and Garsen.

Greenberg, Bradley S. See Dominick and Greenberg.

Greene, Jerome D. **Personal Media Probabilities.**

No. 5, pp. 12-18.

A new method is presented for estimating audience reach and frequency distribution which is relatively simple and low-cost yet better than many existing approaches.

Gruber, Alin. **Purchase Intent and Purchase Probability.**

No. 1, pp. 23-27.

Prediction of consumer purchases often is done by using probability scales. Testing several scales on low-priced food products indicates that an expanded purchase probability scale has greater predictive accuracy.

Guest, Lester. **How Negro Models Affect Company Image.**

No. 2, pp. 29-33.

Advertisers need not be fearful of using Negro models or integrated advertising. Study results also refute the suggestion that hostility toward blacks exists when whites' status is threatened.

Hansen, Richard W. See Draper, Hansen, and Scott.

Hensel, James S. See Blackwell, Hensel, and Sternthal.

Hilton, Bob D. See McNiven and Hilton.

Kanter, Donald L. **Communications Theory and Advertising Decisions.**

No. 6, pp. 3-8.

The difficulty of bridging the gap between communications theory and advertising decisions is that most people don't just have *attitudes toward advertising.*

Krugman, Herbert E. **Temporary Effects of Communication.**

No. 1, pp. 15-17.

What happens during or between measures to advertising stimuli? Stable responses to verbal questions vary with associated visual stimuli. Product quality and other corporate virtues also appear susceptible to the influence of communication at the time of exposure.

Larson, Carl M. and Hugh G. Wales. **Slogan Awareness in the Chicago Market.**

No. 6, pp. 38-41.

A Chicagoan's income, sex, race and age are related to his awareness of popular slogans.

Lanitis, Tony. **How to Generate New Product Ideas.**

No. 3, pp. 31-35.

Most new product development places emphasis on "given" ideas. More important, though, are procedures for generating innovative and pertinent concepts.

Leavitt, Clark, Charles Waddell, and William Wells. **Improving Day-After Recall Techniques.**

No. 3, pp. 13-17.

Improved yet simple coding and collection procedures give more information from the standard day-after recall test.

Lipstein, Benjamin. **Modelling and New Product Birth.**

No. 5, pp. 3-11.

Modelling is a powerful tool for understanding the market place and for predicting new product success. Here are criteria and illustrations describing modelling and new product birth.

McConnell, J. Douglas. **Do Media Vary in Effectiveness?**

No. 5, pp. 19-22.

Each medium may have different effects upon potential buyers, and some media may be more suitable for advertising particular products than others.

McNiven, Malcolm and Bob D. Hilton. **Reassessing Marketing Information Systems.**

No. 1, pp. 3-12.

Complicated conceptual problems, human stumbling blocks, and hardware which has outpaced software have delayed fulfillment of the computer's promise. The time has come for reassessing MIS.

Mayer, Charles S. **CATV Test Laboratory Panels.**

No. 3, pp. 37-43.

Split-cable test panels can provide unambiguous measures of TV commercial effectiveness. Their success, however, depends on effective use of the right statistical tools.

Montgomery, David B. and J. Scott Armstrong. **Brand Trial After a Credibility Change.**

No. 5, pp. 26-32.

What happens after a brand's credibility is enhanced? Is it possible to predict the characteristics of consumers who respond? These and other questions are answered in this case study about Crest toothpaste.

Myers, James H. **Finding Determinant Buying Attitudes.**

No. 6, pp. 9-12.

Which features of cat food or snacks most influence a buyer's choice of brands? Nothing more complex than regression analysis is required to find determinant buying attitudes.

Myers, John G. See Becker and Myers.

XUM

Ognibene, Peter. **Traits Affecting Questionnaire Response.**

No. 3, pp. 18-20.

Respondents to a mail questionnaire showed stronger leadership traits, were more gregarious, and had more ambitious reading habits than non-respondents.

Orenstein, Frank. See Bogart, Tolley, and Orenstein.

Ostheimer, Richard H. **Frequency Effects Over Time.**

No. 1, pp. 19-22.

Media planners should wonder about the audience of additional commercial exposures, right? Wrong. The real question about additional exposures, often omitted in research studies, is: How effective are they, at which points in time?

Rogers, Nigel. See Caffyn and Rogers.

Scott, Richard A. See Draper, Hansen, and Scott.

Sheth, Jagdish N. **Multivariate Analysis in Marketing.**

No. 1, pp. 29-39.

Formerly expensive, exotic and ill-understood, today most analytic methods have—thanks to computers—become affordable and commonplace.

Simon, Marji Frank. **Influence of Brand Names on Attitudes.**

No. 3, pp. 28-30.

Brand leaders can elicit more favorable attitudes than ad content may warrant, mainly because of the positive influence of their companies' names.

Stafford, James E., Al E. Birdwell, and Charles E. Van Tassel. **Integrated Advertising—White Backlash?**

No. 2, pp. 15-20.

Using verbal measures and the pupillometer to study integrated ads for an auto and a lipstick, white respondents were found to be indifferent to well-conceived integrated advertisements.

Sorenson, Douglas D. **Three Views of Cooperative Advertising.**

No. 6, pp. 13-19.

By comparing attitudes of dealers, manufacturers, and customers, guidelines are established for more effective advertising.

Sternthal, Brian. See Blackwell, Hensel, and Sternthal.

Tobolski, Francis P. **Direct Mail: Image, Return & Effectiveness.**

No. 4, pp. 19-25.

Image profiling with semantic differential scales can be used to evaluate direct mail approaches. This profiling also can show when a mailing piece is functioning for the recipient.

Tolley, B. Stuart. See Bogart, Tolley, and Orenstein.

Waddell, Charles. See Leavitt, Waddell, and Wells.

Wales, Hugh G. See Larson and Wales.

Wells, William. See Leavitt, Waddell, and Wells.

Wallace, William H. See Winters and Wallace.

Winters, Lewis C. and Wallace H. Wallace. **On Operant Conditioning Techniques.**

No. 5, pp. 39-45.

CONPAAD is proving to be a valid and reliable predictor of attention and recall wearout of TV commercials.

Van Tassel, Charles. See Stafford, Birdwell, and Van Tassel.
